Get Location

```
In [1]:  import geopy
         from geopy.geocoders import Nominatim
```

```
In [2]:  geolocator = Nominatim(user_agent="app")
```

```
In [3]:  location = geolocator.geocode("Sandakan")
         location
```

```
Out[3]:  Location(Sandakan District, Sabah, Malaysia, (5.8391337, 118.1158919, 0.0))
```

```
In [4]:  location.latitude, location.longitude
```

```
Out[4]:  (5.8391337, 118.1158919)
```

Draw Map

```
In [5]:  import folium
```

```
In [6]:  folium.Map(location=[location.latitude, location.longitude], zoom_start=30)
```

Out[6]:

```
In [ ]:
```
